### IMPORTANT NOTES

- DIMENSIONS ARE REFERENCED FROM THE EDGE OF THE OPENING
- FOR CRITICAL FITS DUE TO REDUCED AVAILABLE HEADROOM OR SIDEROOM CLEARANCES, CONSULT FACTORY

## STEP 1: WALL OPENING

- Check wall opening width and height and verify these measurements against size of door to be installed.
- Verify that jambs are plumb.
- Check floor and header for level.
- Check for adequate side clearance at jambs and clearance above and at sides of header. Check vertical and horizontal head room requirements. **See Figure 2 and 3** for minimum requirements.
- Verify that guide mounting surface on jamb is flush.
- Make sure all parts required for installation are with the door.

**FIGURE 4:  
WALL OPENING**

## STEP 2: POSITION DOOR & PARTS

- Verify floor area is clean in order to prevent damage to curtain.
- Inside the building place, left guide on floor perpendicular to opening with guide bottom close to left jamb and the top toward inside of building. Repeat step to the right side.
- Place door on floor at top of and between guides. Rotate door as necessary to locate bottom bar against floor. **See figure 5.**
- Distribute hardware parts to appropriate areas.

**FIGURE 5:  
POSITION DOOR AND PARTS**

### STEP 3: EXTENDED MINI BRACKETS TO GUIDES:

- At tensioner end of door, lift flange on tensioner pawl until end of pawl clears the tensioner ratchet wheel (**Figure 6**). Rotate bracket in order to position short leg end upwards (**Figure 7**). Release flange on pawl and allow end to engage with the nearest tooth on the ratchet wheel.
- Bring top end of guide in alignment with bracket and insert tabs on bracket into tab slots in guide (**Figure 8**).
- Slide bracket and guide together until locking tab in guide fully engages notches in bracket.
- If locking tab does not fully engage with bracket notch, use hammer and punch to bend tab into bracket notch.
- Repeat above steps for non tensioner bracket guide. The bracket will need to be held in position.

#### NOTE:

- FOR PANTHEON JSS INSTALLATION GUIDE, SEE PAGE 15.
- FOR ATA OPERATOR INSTALLATION GUIDE, SEE PAGE 16.

#### WARNING!

ENSURE TENSIONER PAWL IS FULLY ENGAGED WITH TENSIONER RATCHET WHEEL TOOTH. **SEE FIGURE 6** FOR VISUAL REFERENCE.

**FIGURE 6:**  
**LIFT TENSIONER PAWL**

**FIGURE 7:**  
**BRACKET POSITIONING**

**FIGURE 8:**  
**SNAP ON BRACKET**

#### WARNING!

LOCKING TAB IN GUIDE MUST FULLY ENGAGE WITH NOTCH IN BRACKET. FAILURE TO DO SO MAY ALLOW THE DOOR TO FALL DURING INSTALLATION, WHICH CAN CAUSE SERIOUS INJURY OR DEATH AND/OR DAMAGE TO DOOR.

## STEP 4: LIFTING DOOR ASSEMBLY

- Move door and guide assemblies toward wall opening with bottom of guide resting next to jambs.
- Lift door assembly evenly, pivoting around bottom of guides (**Figure 9**).

### NOTE:

- DOORS OVER 8'-0" HIGH WILL REQUIRE A MECHANICAL LIFTING DEVICE TO LIFT DOOR & GUIDES INTO MOUNTING POSITION.
- ANY MECHANICAL LIFTING DEVICE SUCH AS FORKLIFTS OR GENIE LIFTS, MUST BE PADDED TO PREVENT CURTAIN DAMAGE.

### WARNING!

TWO INSTALLERS ARE REQUIRED TO LIFT DOOR ASSEMBLY INTO POSITION AGAINST JAMBS. THE GUIDES ARE NOT DESIGNED TO SUPPORT THE DOOR WEIGHT DURING A ONE MAN INSTALLATION. ATTEMPTING INSTALLATION WITH ONLY ONE INSTALLER CAN RESULT IN SERIOUS INJURY AND/OR DAMAGE TO DOOR. DO NOT LEAVE DOOR UNATTENDED UNTIL IT IS SECURELY ATTACHED TO JAMBS.

### NOTE:

FOR OPENING HEIGHTS OVER 8'-8". CLAMP BOTTOM OF BRACKETS TO GUIDES WITH LOCKING PLIERS IN ORDER TO ENSURE RIGIDITY OF TOP OF GUIDE WHILE LIFTING. REMOVE PLIERS AFTER SECURING BRACKETS TO JAMBS.

## STEP 5: GUIDES & BRACKETS TO JAMB

- Attach brackets & guides to jambs using fasteners shown in **Table 1** on page 9.
- The guides should be mounted centered about the opening and spaced curtain width + 1". This spacing is measured from back of guide to back of guide. Both guides must be plumb. **See figures 11-13.**
- The appropriate fasteners must be installed at each hole location in brackets & guides. **See figure 10.**

### WARNING!

DOOR CAN FALL IF BOTH BRACKETS ARE NOT SECURELY FASTENED TO THE JAMBS. ALL FASTENERS ATTACHING BRACKETS TO JAMBS MUST FIT SECURELY INTO A STRUCTURAL MEMBER OR SURFACE. IF DOOR FALLS, SERIOUS INJURY OR DEATH AND/OR DAMAGE TO DOOR CAN RESULT.

## STEP 5: GUIDES & BRACKETS TO JAMB (CONTINUED)

### WARNING!

DOOR CAN FALL IF BOTH BRACKETS ARE NOT SECURELY FASTENED TO THE JAMBS. ALL FASTENERS ATTACHING BRACKETS TO JAMBS MUST FIT SECURELY INTO A STRUCTURAL MEMBER OR SURFACE. IF DOORS FALLS, SERIOUS INJURY OR DEATH AND/OR DAMAGE TO DOOR CAN RESULT.

### NOTE:

WELDING OF GUIDES TO THE JAMBS IS NOT RECOMMENDED.

## STEP 6: SETTING INITIAL SPRING TENSION

- Before applying initial spring tension, ensure tensioner pawl is fully engaged with tensioner ratchet wheel tooth.  
**See Figure 14** below for visual reference.
- Rotate door two (2) revolutions in the direction that would send the bottom bar down through the guides.
- While firmly holding the door at the bottom bar, cut the tape and plastic wrap that holds the door in a coil. Direct the bottom bar down into the guides, stopping just past the head stop area and hold securely through completion of **Step 7**.

**FIGURE 14:**  
**SETTING INITIAL SPRING TENSION**

### **WARNING!**

EXTREME SPRING TENSION CAN CAUSE SERIOUS INJURY OR DEATH. INSTALLATION, REPAIRS, AND ADJUSTMENTS MUST BE MADE BY A TRAINED ROLLING SERVICE DOOR SYSTEM TECHNICIAN USING PROPER TOOLS AND INSTRUCTIONS.  
**DOOR MUST BE FULLY OPENED WHEN MAKING ADJUSTMENTS.**

### **WARNING!**

ENSURE TENSIONER PAWL IS FULLY ENGAGED WITH TENSIONER RATCHET WHEEL TOOTH.

## STEP 7: HEADSTOPS

- Secure each headstop to guide with 3/8" - 20 Split-Lock Washer and 3/8" - 16 x 1/2" Hex Bolt. **See Figure 15**.

**FIGURE 15:**  
**WINDLOCK HEADSTOPS**

## STEP 8: STOP CLIPS & SLIDE LOCKS

- For a chain hoist operated door, install commercial step plates and commercial slide locks at each end on inside of bottom bar. **See Figure 16.**
- For motor operated door, install commercial step plates only. **See Figure 17.**

**FIGURE 16:**  
**COMMERCIAL STEP PLATES &  
SLIDE LOCKS**

**FIGURE 17:**  
**COMMERCIAL STEP PLATE**

### **WARNING!**

INSTALLATION OF COMMERCIAL STEP PLATES ARE REQUIRED. FAILURE TO PROPERLY INSTALL STEP PLATES WILL RESULT IN THE DOOR CURTAIN TO TRAVEL BEYOND THE GUIDES RESULTING IN DOOR DAMAGE AND/OR PERSONAL INJURY.

## STEP 9: CHECK DOOR OPERATION

- Lower and raise the door to test the doors balance.
- If door is easy to close but difficult to open; increase spring tension. **See figure 18, on page 12.**
- If door is difficult to close but easy to open; decrease spring tension. **See figure 18, on page 12.**

### **NOTE:**

MANUAL ADJUSTMENTS OF SPRING TENSION MAY BE REQUIRED. ADJUSTMENTS ARE TO BE MADE USING A 3/8" DIAMETER WINDING BAR. WHEN MAKING ADJUSTMENTS, ENSURE TENSIONER PAWL IS FULLY ENGAGED WITH TENSIONER RACHET WHEEL TOOTH BEFORE REMOVING WINDING BAR FROM IT. **SEE FIGURE 18** FOR VISUAL REFERENCE.

## STEP 10: ADJUST SPRING TENSION

- ▶ Place  $\frac{3}{8}$ " diameter winding bar in tensioner ratchet wheel.
- ▶ Rotate winding bar in the down direction to increase spring tension. Each engagement of a tooth equals  $\frac{1}{8}$  turn.
- ▶ To decrease spring tension, pull down slightly on winding bar until pawl disengages tooth. Lift flange on pawl and move winding bar up until just past the pawl/tooth engagement. Allow pawl to rest on ratchet wheel and continue moving winding bar up until pawl is fully engaged with the tooth.
- ▶ Remove winding bar and operate door.
- ▶ Repeat steps above (If needed).

### WARNING!

COMPONENTS UNDER EXTREME SPRING TENSION COULD RESULT IN DEATH OR SERIOUS INJURY. ADJUSTMENTS MUST BE MADE BY TRAINED ROLLING DOOR TECHNICIANS USING PROPER TOOLS. DOOR MUST BE FULLY OPENED WHEN MAKING ADJUSTMENTS

**FIGURE 18:**  
**TENSIONER PAWL ENGAGEMENT**

### NOTE:

LATCH SLIDE SLOT IN THE GUIDE MAY REQUIRE ADJUSTING AFTER DOOR INSTALLATION DUE TO VARIANCES IN MANUFACTURING AND/OR SITE CONDITIONS

# Operation and Maintenance

The following manual is provided to evaluate the operational performance and future maintenance of Janus International Rolling Sheet door product line. Janus International mandates rolling sheet door product installation by trained rolling door technicians and future maintenance by experienced/qualified personnel. Specific parts, components, assemblies, etc. that are determined to be defective, worn or unsafe by performance evaluations or preventative maintenance programs must result in rolling sheet door assembly taken out of service. All repairs, part replacements or adjustments must be made by trained rolling door technicians to place rolling sheet door assembly back into service. It is **MANDATORY** that all Janus International door technicians and other technicians, installers and future maintenance staff comply fully with all safety information, procedures and instructions contained in this manual. **Failure to do so could result in premature part/component failure resulting in serious injury or death to others** and, with respect to Janus International door technicians, immediate termination of employment

**Adjustments, part replacement, repairs, etc. must be performed by trained rolling door technician**

## ROLLING SHEET DOOR PERFORMANCE EVALUATION

- Rolling Door operation should be easy at/near the open and closed positions. Rolling Door may require more effort to open through the middle portion of travel.
- Rolling Door operation to the open position should result in bottom bar angle resting against head stops and remain in the open position.
- Rolling Door operation should not exceed 35lb. of force for hand chain operation, and 30 lb. for manual operation.
- Rolling Door operational balance evaluation:  
*If door operation is easy to close, but hard to open; spring tension needs to be increased*  
*If door operation is hard to close, but easy to open; spring tension needs to be decreased*  
**Spring tension adjustments must be made by trained rolling door technician. Refer to Rolling Door installation instructions for tension adjustment procedure.**

### ▲ **WARNING: Extreme spring tension can cause serious injury or death** ▲

- Rolling Door electrical motor operation should be evaluated quarterly.
- Prior to Rolling Door electrical motor operation ensure that doorway is clear and in full view before and during complete operation cycle.
- UL 325 requires constant pressure to close for doors without sensing edges or photoelectric sensors/eyes.
- Sensing devices should be tested at least weekly. Sensing edges should be tested at both ends to evaluate proper operation. Photoelectric eyes must be tested by breaking beam to evaluate proper operation.
- Evaluate operator limit setting at door travel open and closed positions. If operator limit setting has become out of sync with door open and close positions, refer to operator installation instructions to reset limits to an appropriate setting in relationship to door open and closed positions.
- If at any time during Rolling Door electrical motor operation, motor sounds like it is under excessive load or stress to open the door:
  - ▲ Close door using motor operator. Engage motors manual operation feature to manually operate the door to the open position.
  - ▲ If door operation is heavy, cannot be completely opened or hard to open and will not stay in open position; Spring Assembly counterbalance evaluation is required, which may require adjustment or replacement.
  - ▲ **Spring tension adjustments or repairs must be made by trained rolling door technician. Refer to Rolling Door installation instructions for tension adjustment procedure.**
  - ▲ **Determination of counterbalance repair must result in Rolling Door taken out of service until required repairs are complete.**

## **VISUAL INSPECTION**

### **Guides:**

- Guide fasteners must be present and secured in each existing hole/slot provided with fasteners supplied by Janus International.
- Guides must not be bent, crushed or damaged in a way that binds the curtain and/or bottom bar assembly at any portion of travel.
- Head stops must be securely fastened in place at top of guide to prevent bottom bar from traveling out of the top of the guides when rolling door curtain is fully raised to the open position.
- Inspect guide wear strip (when provided) for excessive cracking, tearing, wear or absence.

### **Curtain:**

- During rolling door operation, curtain and bottom bar assembly must move freely inside guides and not contact header or ceiling.
- Latches, Step Plates, Slidelocks, Windlocks, etc. (when provided) must always be securely fastened to curtain assembly.
- **Windlocks should never be removed from curtain.**
- Inspect curtain wear material or felt tape (when provided) for excessive tearing, wear or absence.
- Inspect Weather Seals; Top Draft Stop, Aide Draft Stop, Brush (when provided)

### **Brackets/Mounting Plates:**

- All fasteners must be present and secured with fasteners detailed in installation instructions.
- Brackets & Mounting plates (when provided) must not be bent or damaged in a way that adversely effects the safe operation of door assembly.

### **Hood Assembly:**

- When provided, all fasteners attaching hood endcaps, hood support (when provided), and hood to wall must be secure.
- Hood endcaps or hood must not be bent or crushed in a manner which binds the curtain thus hindering the proper operation of rolling door operation.

### **Chain Hoist Gears:**

- Fasteners attaching all chain hoist components, & gears must be securely fastened.
- Visually inspect gears for broken, cracked, missing or extremely worn teeth.
- Clear debris from gear teeth.

### **Sprockets and Roller Chain Drive:**

**▲Sprocket misalignment will result in excessive wear and could cause roller chain to jump off of sprocket during operation or lead to premature failure of roller chain assembly.**

- Visually inspect sprocket alignment between Rolling Door sprocket and output sprocket of motor operator. Align sprockets and tighten set screws as needed.
- Inspect roller chain for excessive wear or damage.
- Roller Chain Lubrication: SAE 20 oil to be used for service temperatures between 32° F and 104° F. Apply oil where chain tension is minimal.
- Check fasteners and tighten as required.

### **Tensioning Devices & Axle Supports:**

- Fasteners attaching all tensioning devices and axle supports must be securely fastened.
- Set screws securing axle must be securely fastened.
- Inspect for components for damage or deformity.

**▲Determination of tensioning device repair or replacement must result in Rolling Door taken out of service until required repairs are complete. Repair or replacement must be performed by trained rolling door technician**

**▲Product safety labels should be periodically inspected and cleaned by the product user as necessary to maintain good legibility for safe viewing distance**

**Product safety labels should be replaced by the product user when they no longer meet the legibility requirements for safe viewing distance. In any case where products have an extensive expected life or where exposed to extreme conditions, the product user should immediately contact Janus International to obtain replacements.**
